WUTTIPHONG BUTTA

(+66) 62-402-4536 | Wuttiphong4work@gmail.com | linkedin.com/in/wuttiphong-butta | github.com/WinnerX36

SUMMARY

Recent Computer Science graduate and full-stack developer with hands-on experience building production web applications end-to-end — from backend APIs and cloud deployment to frontend interfaces. Built a full-stack billing and invoicing platform with real-time cash-tracking for a live business client, and shipped AI-powered systems including a production OCR pipeline (98.88% accuracy) and customer-facing chatbots. Proficient across React, Next.js, Node.js, FastAPI, Docker, and AWS, with additional depth in AI/ML engineering as a differentiator.

EDUCATION

Bachelor of Science in Computer Science **Jul 2026**

Bangkok University, School of Information Technology and Innovation | GPAX: 3.00

WORK EXPERIENCE

AI & Technology Specialist — Full Stack Development **Jul 2026 – Present**

Give Education, Bangkok

- Built a full-stack billing and cash-tracking platform for client Aquatots Thailand — enabling in-app invoice/receipt generation and a real-time revenue-monitoring system ("Cashtoday").
- Integrated QuickBooks API for accounting synchronization and deployed services using Docker and Cloudflare Tunnel.
- Accompanied company CEO to H.O.W. (House of Wisdom) sessions — an invitation-only Bangkok leadership community — contributing technical perspective to executive-level discussions on AI strategy and digital transformation.

Tech Stack: React, Next.js, Node.js, Python, Docker, Cloudflare Tunnel, QuickBooks API

AI Engineer Intern — Project Management Department **Jan 2026 – May 2026**

Smarterware Co., Ltd. (A Member of SAMART TELCOMS), Bangkok

- Developed a multi-class AI-OCR system by fine-tuning Typhoon OCR (SCB's open-source Thai-language OCR model) using LoRA adapters via Unsloth — achieving 98.88% text-extraction accuracy and reducing manual processing time by 80%, deployed via FastAPI, Docker, and AWS SageMaker.
- Fine-tuned LLM and ML models in Python, tracked experiments with MLflow, and managed datasets with Label Studio and object storage with MinIO.
- Led QA/Testing and UAT for PEA Smart Plus: created 30+ test scenarios, tested 50+ API calls, corrected 100+ SQL records, and authored user manuals for system handover.
- Coordinated with cross-functional teams (developers, PM, and business unit) to align testing scope and resolve data discrepancies.

Tech Stack: Python, FastAPI, Docker, MLflow, MinIO, AWS S3, AWS SageMaker, LoRA Fine-tuning, Unsloth

LINE OA Chatbot Developer **2026**

Aquatot-Swimming School Pinkalo, Bangkok

- Developed an AI-powered LINE OA Chatbot with automated workflows for FAQs, service information, and customer support.
- Integrated LINE OA API with AI and backend services to improve communication efficiency.

Freelance — Technical SEO & AI Search Optimization (GEO/AEO) **2026 – Present**

Independent Consultant, Remote

- Delivered technical SEO, GEO, and AEO audits and optimizations for early-stage freelance clients, improving visibility and ranking trends across traditional and AI-powered search platforms.
- Developed AI Search Intelligence tools for automated SEO, GEO, and AEO analysis.
- Communicated audit findings and strategy recommendations directly to clients, translating technical results into clear, actionable reports.

PERSONAL PROJECTS

Carcom — AI-Powered Car Comparison Web App **University Capstone Project**

Team Project | Full-Stack Role (Frontend, Backend & AI Integration)

- Built a full-stack car comparison web app (frontend, backend, AI integration) that scrapes and aggregates pricing and spec data from multiple car-sales websites using Scrapy.
- Designed prompt-engineering workflows leveraging LLM APIs (OpenAI/Gemini/Claude) to evaluate and rate vehicles on a 1–5 scale, helping users make informed purchase decisions.

Tech Stack: React, Next.js, Node.js, FastAPI, Scrapy, LLM API (OpenAI/Gemini/Claude)

qwenmythos — Open-Source Deep Reasoning AI

- Developed a highly efficient 4B-parameter open-source AI model using a "Looped Transformer" architecture that re-processes information to mimic deeper reasoning — matching larger models' performance on standard consumer hardware.
- Fine-tuned using DoRA (Weight-Decomposed Low-Rank Adaptation) on Kaggle's GPU infrastructure, with training datasets curated and hosted on Hugging Face Hub.
- Integrated with Ollama for local model deployment/inference and OpenCode for AI-assisted coding workflows.

Tech Stack: Python, PyTorch, Hugging Face (Transformers, Hub), Kaggle, DoRA Fine-tuning, Ollama, OpenCode

TECHNICAL SKILLS

Languages:	Python, SQL, JavaScript, TypeScript, HTML5, CSS3
Backend & APIs:	FastAPI, Flask, Node.js, REST APIs, OpenAPI/Swagger, Bruno
Frontend:	React, Next.js
Databases:	PostgreSQL, MySQL, Supabase
Cloud & DevOps:	AWS S3, AWS SageMaker, Docker, MinIO, Git, GitHub, GitLab, GitLab CI/CD, Linux
AI/ML:	Hugging Face Transformers, LLM Fine-tuning (LoRA/Unsloth), YOLO, OCR Systems, MLflow, RAG
Platforms & Tools:	OpenCode, n8n (Workflow Automation), LINE OA API
Spoken Languages:	Thai (Native), English (Intermediate)
